The Electrochemical Society

1902-2002: A Centennial History

by Forrest A. Trumbore and Dennis R. Turner

The 19th century saw many applications of electricity to chemical processes and chemical understanding. Bridging the gap between electrical engineering and chemistry led innovative young men in industrial and academic circles to search for a new forum to discuss developments in the burgeoning field of electrochemistry. Into this era, The Electrochemical Society was born in 1902. ECS continues to be that forum for electrochemical and solid-state science and technology envisioned over 100 years ago. This history book is a record and a celebration of one hundred years of The Electrochemical Society. It is witness to a remarkable organization, one that has always recognized that its longevity, vitality, and achievements have been an aggregation of the efforts of all those individuals who have made this Society successful and long-lived. Hardcover • 204 pages • ISBN 1-56677-326-1 \$25.00 member and nonmember, prepayment required To order—call, e-mail, or visit our website.
