## In the **NEXT** issue of **INTERFACE**

- The issue will include a Special Meeting Section on the **223<sup>RD</sup> ECS MEETING IN TORONTO, CANADA**, May 12-17, 2013. See who's giving special talks, plan to learn a new technology area in one of the Short Courses, attend the Career Fair, and re-connect with friends and colleagues. Early-bird deadline for hotel reservations is April 12, 2013.
- **THE TRANSISTOR AND ITS MANY FACETS** will be featured in the winter 2012 issue. Guest edited by **Jerzy Ruzyllo**, the issue will include four articles that reflect the diversity of transistor designs: **Suman Datta** reviews "Recent Advances in High Performance CMOS Transistors – from Planar to

Non-Planar (3D)." **Krishna Shenai** moves the discussion of transistor evolution to the opposite end of the spectrum in a paper entitled, "Switching megaWatts with Power Transistors." In a paper entitled, "Thin Film Transistor Technology-Past, Present and Future," **Yue Kuo** discusses a path in transistor evolution that is concerned with thin film transistor (TFT) technology. To round out the feature articles, there is a paper on "Graphene Transistors and Photodetectors" co-authored by the team of **A. V. Klekachev, A. Nourbakhsh, I. Asselberghs, A. L. Stesmans, M. Heyns, and S. De Gendt**.

- **TECH HIGHLIGHTS** continues to provide readers with free access to some of the most interesting papers published in the ECS journals, including articles from the Society's newest journals: *ECS Journal of Solid State Science and Technology*, *ECS Electrochemistry Letters*, and *ECS Solid State Letters*.
