R. WINSTON REVIE

CANMET Materials Technology Laboratory in Ottawa, Canada

978-0-470-08032-0 • 1,200 pages • Hardcover • October 2010
\$195.00 US / CAN \$234.00 / £133.00 / €172.00

PRAISE FOR THE SECOND EDITION

"An excellent sourcebook on a wide range of corrosion topics."

—Chemical Engineering Research and Design

Continuing a legacy that began with the classic 1948 edition comes this long-awaited, fully revised Third Edition of the authoritative guide on corrosion. A thorough and timely compilation, *Uhlig's Corrosion Handbook, Third Edition* explores, in eighty-eight chapters, a multitude of subjects important to understanding the methods for controlling the degradation of materials. It includes updates of all information along with many new chapters including corrosion monitoring; principles of accelerated corrosion testing; failure analysis; composite materials; diagnosing, measuring, and monitoring microbiologically influenced corrosion; and high-temperature oxidation of metals and alloys. In addition, this new Third Edition:

- Gives a solid summary of the scientific background of all the types of corrosion in a comprehensive and well-organized way
- Includes new coverage of many important corrosion topics, including nuclear waste containment, CO² corrosion of steel, ethanol-induced stress corrosion cracking, dealloying, shape memory alloys, nanocrystals, and corrosion of electronics
- Features information on the standards for corrosion testing, microbiological corrosion, and electrochemical noise
- Presents both scientific and practical approaches, making it extremely useful for all materials science professionals

Valuable contributions from internationally renowned authors once again help distinguish *Uhlig's Corrosion Handbook, Third Edition* as a leading resource in the field as each page builds on the book's longstanding reputation as an indispensable companion for engineers, scientists, students, and others concerned with the use of materials in applications where integrity, reliability, and resistance to corrosion are critical.

ABOUT THE AUTHOR

R. WINSTON REVIE has had a career of more than thirty years at the CANMET Materials Technology Laboratory in Ottawa, Canada, where he is a Senior Research Scientist and Program Manager. Currently, he is President of the NACE Foundation of Canada, a registered educational charity. He is also past director of the Northern Area of NACE International; a past chairman of the ASM Canada Council and of the Electrochemical Society Canadian Section; and a past president of the Metallurgical Society of the Canadian Institute of Mining, Metallurgy and Petroleum. Dr. Revie coauthored the third and fourth editions of *Corrosion and Corrosion Control*, a widely used textbook, and was the editor of the second edition of *Uhlig's Corrosion Handbook*. Dr. Revie is a Fellow of NACE International, ASM International, and the Canadian Institute of Mining, Metallurgy and Petroleum.
