

Table of Contents

Direct-Oxidation Fuel Cells Based on Nanoporous Proton- Conducting Membrane (NP-PCM) <i>E. Peled, T. Duvdevani, A. Aharon, and A.Melman</i>	1
The Nature of Proton Transport in Fully Hydrated Nafion <i>S. Paddison , B. Pivovar and R. Paul</i>	8
Fabrications and Direct Methanol Fuel Cell Applications of Nafion based Organic-Inorganic Hybrid Membrane <i>H. Kim, C. Lim, and H. Chang</i>	14
Theoretically Computed Proton Diffusion Coefficients in Hydrated PEEKK Membranes <i>S. Paddison, R. Paul, K.-D. Kreuer, T. Zawodzinski</i>	29
High Temperature Methanol Crossover in Proton-Conducting Polyphosphazene Membranes <i>X. Zhou, M. Hofmann, J.A. Weston, E. Chalkova, M. Fedkin, H. Allcock and S. Lvov</i>	34
Thin-film Pt-RuO _x H _y Electrodes for Direct Methanol Fuel Cells <i>C. Love, K. Swider-Lyons, and D. Rolison</i>	42
CO _{ad} Coverage and Current Efficiency of Methanol Oxidation Studied by DEMS and Potential Step Experiments <i>H. Wang and H. Baltruschat</i>	50
Surface Area Determination of Unsupported High Surface Area PT-RU Electrocatalysts by Underpotential Deposition of Copper <i>C. Green and A.Kucernak</i>	61
Oxygen Reduction Activity and Corrosion Resistance of Some Base Metal Carbides in a Sulfuric Acid Solution <i>A. Vossen, D.R. McIntyre, and G.T. Burstein</i>	71
Electrocatalyzed Oxidation of HCOOH on Platinum Electrode Modified by Bismuth Adatom <i>J. Lee, J. Christoph, P. Strasser, M. Eiswirth, and G. Ertl</i>	80
Effects of Anions Leading to Increases in Steady-State Efficiency and Reaction Rates in the Electrochemical Oxidation of Formic Acid <i>M. Schell, S. Chen, and T. Noles</i>	93

Heat-Treated Binary Metalloporphyrins for Methanol Tolerant Cathode in Direct Methanol Fuel Cells <i>D. Chu and R. Jiang</i>	102
Methanol Oxidation Activity of Co-Sputter Deposited Pt-Ru Catalysts <i>C. Witham, T. I. Valdez and S. R. Narayanan</i>	114
Direct Methanol Fuel Cells at Reduced Catalyst Loadings <i>P. Zelenay, F. Guyon, and S. Gottesfeld</i>	123
Bifunctionality on Pt alloy Nanocluster Electrocatalysis for Enhanced Methanol Oxidation and CO Tolerance in PEM Fuel Cells: Electrochemical and <i>in situ</i> Synchrotron Spectroscopy <i>S. Mukerjee, R.C. Urian, C. K. Witham, T. I. Valdez and S. R. Narayanan</i>	136
The Influence of the Nafion Content in DMFC Anode Catalyst Layers <i>A. Havranek, K. Klafki, and K. Wippermann</i>	153
Analysis of Voltage Transients in Direct Methanol Fuel Cells <i>S.R. Narayanan and T. I. Valdez</i>	164
Carbon Supported Pt, Pt/W and Pt/Mo Electrocatalyst for Methanol Oxidation: Electrochemical and IR Spectroscopic Characterization <i>G. Gokagac, F. Hahn, C. Lamy, and J.-M. Leger</i>	174
Combinatorial Approach to High Speed Screening Electrocatalysts for Direct Methanol Fuel Cells <i>D. Chu and R. Jiang</i>	188
Combinatorial Electrochemical Techniques for the Discovery of New Fuel-Cell Cathode Materials <i>P. Strasser, S. Gorer, M. Devenney and W. H. Wienberg</i>	191
Development of an Air-Breathing 50W Direct Methanol Fuel Cell Stack <i>H. Dohle, J. Mergel, H. Scharmann, and H. Schmitz</i>	209
System Issues for Nafion-based Portable Direct Methanol Fuel Cells <i>B. Pivovar, M. Hickner, T. Zawodzinski, X. Ren, S. Gottesfeld and J. Neutzler</i>	221
Development of a 1 kW Direct Methanol Fuel Cell System <i>A. Kindler, T.I. Valdez, C. Cropley, S. Stone, and E. Veksler</i>	231
Experimental Study of a Direct Methanol Fuel Cell <i>M. Mench, S. Boslet, S. Thynell, J. Scott, and C.-Y. Wang</i>	241

Development of Miniature Fuel Cell for Portable Applications <i>S.R. Narayanan, F. Clara, and T. I. Valdez</i>	254
Hydrogen Peroxide Oxidant Fuel Cell Systems for Ultra-Portable Applications <i>T. I. Valdez, S.R. Narayanan, C. Lewis, and W. Chun</i>	265
Microfluidic Fuel Delivery System for 100mW DMFC <i>J. Bostaph, R. Koripella, A. Fisher, D. Zindel, J. Hallmark, J. Neutzler and L. Bai</i>	274
Mathematical Modeling of Liquid-Feed Direct Methanol Fuel Cells <i>Z.H. Wang and C.Y. Wang</i>	286
Evaluation of Flow Distribution in PEM and DMFC Fuel Cells <i>T. Bewer, T. Beckmann, H. Dohle, J. Mergel, and R. Neitzel</i>	320
A Model for the Porous DMFC Anode <i>J. Nordlund and G. Lindbergh</i>	331
