Welcome to Honolulu—the state capital and Heart of Hawaii, as well as Oahu's center of art, history, and culture. We are pleased to venture into this city again for the PRIME 2008 Joint International Meeting, which combines the 214th ECS Meeting and the 2008 Fall Meeting of ECSJ, and which is technically cosponsored by the Japan Society of Applied Physics (JSAP), the Korean Electrochemical Society (KECS), the Electrochemistry Division of the Royal Australian Chemical Institute (RACI), and the Chinese Society of Electrochemistry (CSE). This major international conference will be held at the Hilton Hawaiian Village (HHV), with some technical sessions at the Hawaii Convention Center (HCC), and will include 53 topical symposia consisting of 3,237 technical presentations.

You are invited to participate not only in the technical program, but also in the other social events planned for the meeting. Plan to attend the Sunday Evening Get Together, kicking off the first of several social events of the week. Don’t miss the opening Plenary Session on Monday morning, featuring Tetsuya Osaka, President of the Magnetics Society of Japan, and professor in the Department of Applied Chemistry, Faculty of Science and Engineering, Waseda University, Tokyo, Japan, who will deliver the ECS Plenary Lecture: “New Developments in Electrochemical Nano-Technology.” Featured on Monday afternoon in the Critical Factors in Localized Corrosion 6 Symposium will be Robert P. Frankenthal, recipient of the ECS 2008 Edward Goodrich Acheson Award, delivering his talk entitled “Passive Films: Their Growth and Properties.” All meeting registrants are cordially invited to attend the Acheson Award reception held in Dr. Frankenthal’s honor on Tuesday evening. You will also have the opportunity to visit the Technical Exhibit, which opens in conjunction with the Monday Evening Mixer and General Student Poster Session, continues through Wednesday, with General Society Poster Sessions on Tuesday and Wednesday evenings. And don’t forget to purchase your tickets for Thursday night’s luau on the Lagoon Green, complete with a spectacular Polynesian show!

Hotel Reservation & Travel Information

PRIME 2008 will be held at the Hilton Hawaiian Village Hotel (2005 Kalia Road, Honolulu, Hawaii 96815, USA), with some technical sessions at the Hawaii Convention Center. The Hilton Hawaiian Village is the meeting headquarters hotel. We encourage you to stay at the Hilton, where your stay will be most enjoyable and convenient. Guest room reservations for the Hilton can be made online from the ECS website. The discounted meeting rates are as follows.

Single, from $179 Double, from $199

The deadline for reservations is September 12, 2008. Reservations attempted after September 12 will be accepted on a space and rate availability basis. A deposit equal to your first night’s stay is required to guarantee your reservation. Cancellation must be received at least 72 hours before expected arrival for a full refund of your deposit.

Ground Transportation

SpeediShuttle ground transportation service is available from Honolulu International Airport to the Hilton Hawaiian Village Hotel at a special discounted rate for PRIME 2008 attendees. Simply make your reservation from the ECS website using Group Code: ECS1960.

Companion Registrants (Formerly “Nontechnical Registrants”)

Guests of Technical Registrants are invited to register for PRIME 2008 as a “Companion Registrant.” The companion registration fee of $25 (Advance) or $30 (Onsite) includes admission to non-ticketed social events, an exclusive lounge with beverage service, Monday through Thursday, 0800-1000h, and a special “Welcome to Oahu” orientation presented by the Oahu Visitors Bureau on Monday, October 13 at 0900h in the Companion Registrants Lounge. On Wednesday, October 15 at 0900h, there will be a group discussion of the book “The Green Room” by Deborah Atkinson—a mystery featuring local Hawaiian history and legend. It is available from the publisher at sales@poisonedpen.com, by phone at 888.560.9919, and national retailers. For questions please contact Linda Frankenthal at lfrankenthal@optonline.net.

General Meeting Information

All meeting events are being held at the Hilton Hawaiian Village (HHV), unless otherwise specified.

Kalua = Kalua Conference Center, HHV
Mid-Pacific = Mid-Pacific Conference Center, HHV
Tapa = Tapa Conference Center, HHV
Rainbow = Rainbow Suites, Rainbow Tower, HHV

Shuttle Service to the Hawaii Convention Center (HCC)
Complimentary shuttle service will be provided between the Hilton Hawaiian Village and the Hawaii Convention Center Monday through Thursday. Schedule information and walking maps will be available in the registration area.

Key Locations
Meeting Registration  Palace Lounge, Tapa
Information/Message Center  Palace Lounge, Tapa
ECS Headquarters Office  Iolani 2, Tapa
ECSJ Headquarters Office  Iolani 1, Tapa
ECS Book Store  Coral Lounge, Mid-Pacific
Speaker Ready Rooms  Office 1, Mid-Pacific
Speaker Ready Rooms  Office 2, Mid-Pacific
Employment Interview Room  Room 307A, Hawaii Convention Center
Book Store Hours
Sunday, October 12  0800-1830h
Monday, October 13  0700-1730h
Tuesday, October 14  0700-1600h
Wednesday, October 15  0730-1500h
Thursday, October 16  0730-1500h
Friday, October 17  0730-1300h

Meeting Registration
The meeting registration area will be located in the Palace Lounge in the Tapa Conference Center. We’ve extended registration hours for your convenience—opening Saturday, October 11 at 1600h. The technical sessions will be conducted Sunday through Friday.

Advance Registration
Advance registration is encouraged. Register online at www.electrochem.org, or fax your registration form to (609) 737-2743. Attendees prepaying by credit card are encouraged to use our online system, or send the form by fax. If you send a registration by fax, please do not send another copy by mail, as this may result in duplicate charges. The deadline for advance registration is September 12, 2008. Refunds are subject to a 10% processing fee and will only be honored if written requests are received by October 5, 2008. All participants of PRiME 2008 are required to pay the appropriate registration fees. Advance and onsite payments must be made in U.S. Dollars via Visa, MasterCard, American Express, check, or money order payable to ECS.

Registration Hours
Saturday, October 11  1600-1900h
Sunday, October 12  0800-1830h
Monday, October 13  0700-1730h
Tuesday, October 14  0700-1600h
Wednesday, October 15  0730-1500h
Thursday, October 16  0730-1500h
Friday, October 17  0730-1300h

Registration Fees
ALL PARTICIPANTS AND ATTENDEES ARE REQUIRED TO PAY THE APPROPRIATE REGISTRATION FEE LISTED BELOW. Payment can be made by cash, check or travelers' checks in U.S. funds drawn on a U.S. bank. Visa, MasterCard, or American Express are also accepted.

*You must be a member of ECS, ECSJ, JSAP, KECS, RACI, or CSE to qualify for the member registration rate.

All students must send verification of student eligibility along with their registration. All technical registrations include a copy of Meeting Abstracts (on CD-ROM only). Attendees who wish to have paper copies of abstracts in advance of the meeting should download copies from the ECS website, free of charge.

Financial Assistance
Financial assistance is limited and generally governed by the symposium organizers. Individuals may inquire directly to the symposium organizers of the symposium in which they are presenting their paper to see if funding is available. Individuals requiring an official letter of invitation should write to the ECS headquarters office; such letters will not imply any financial responsibility of ECS.

Meeting Contact Information
ECS ● The Electrochemical Society
65 South Main Street
Pennington, NJ 08534-2839, USA
Phone: 609.737.2743
E-mail: ecs@electrochem.org
Web: www.electrochem.org
Technical Session Co-Chair Orientation

All technical session co-chairs will be contacted via e-mail with important instructions on conducting their technical session prior to the meeting. Please check in with the ECS headquarters staff in Iolani 2, Tapa, on the day of your session to receive information on the cancelled papers for the day and to pick up attendance sheets. We ask that you complete and return the attendance sheets to ECS headquarters to help us with future symposium planning. Instructions for conducting your session and attendance sheets will be available in the ECS Headquarters office throughout the week. Additionally, we recommend that session co-chairs attend a brief orientation during the first ten minutes of the Symposium Organizer and Co-Chair Orientation on Sunday at 1500h in Honolulu 1, Tapa.

Information for Presenters

Oral Presentations and Audio-Visual

Oral presentations must be in English. Only LCD projectors will be available for oral presentations. Authors will be required to bring their own laptop computers for presentation. We strongly suggest that presenting authors verify laptop/projector compatibility in the speaker-ready rooms at the meeting. Speakers requiring special equipment must make written request to ECS headquarters (meetings@electrochem.org) no later than two weeks before the meeting, and appropriate arrangements will be made at the expense of the author.

Poster Presentations and Sessions

Poster presentations must be in English, on a board approximately 4 feet high by 8 feet wide (1.22 m high by 2.45 m wide), corresponding to the abstract number and day of presentation in the final program. Please arrive approximately two to four hours before the start of your session to begin setting up your poster displays. Please do not begin setting up your poster until all the poster boards have been numbered. Plan your display to fit on one upright panel approximately 4 feet high by 8 feet wide (1.22 m high by 2.45 m wide). Present displayed information from left to right, starting at the top left of the panel. The paper title, number, names, and affiliations of all authors MUST be at the top of the display. The recommended print size for the title is approximately 1" to 2" (2.5 cm to 5 cm) high. Authors should minimize written text but use it when necessary to emphasize essential data and/or to stimulate discussion. All illustrations, drawings, charts, pictures, graphs, figures, and written text should be large enough to allow easy reading from a distance of 5’ (1.5 m). Matted and finished photographs are recommended to enhance visibility. Pushpins and/or thumbtacks will be supplied at the meeting. Commercial advertisements or publicity will NOT be permitted in poster presentations. Authors violating this regulation will be asked to remove their presentations immediately.

Authors are responsible for setting up their displays, for being present during the entire scheduled poster session, and for removing their displays at the conclusion of the poster session. No posters will be displayed without author participation. NO EXCEPTIONS WILL BE GRANTED. Authors are responsible for the security of their displays and all items of value. ECS will not assume any responsibility for lost, stolen, or broken articles. Additional information or special requirements should be addressed to the individual symposium organizers prior to the meeting.

General Student Poster Session

The General Student Poster Session will be held as a part of the Monday Evening Mixer and Technical Exhibit, which features instruments, materials, systems, publications, and software of interest to meeting attendees. All meeting registrants are invited to attend. Formal presentations will begin at 1800h.

Students may start setting up their presentations in the Coral Exhibit Hall, Mid-Pacific, at 1400h; judging of the posters will begin at 1700h. Participants are encouraged to attend the Technical Exhibit on Tuesday at 1200h where the winners will be announced and given an award plaque.

Speaker-Ready Rooms

Two Speaker-Ready Rooms will be available Sunday through Friday, in Offices 1 & 2, Mid-Pacific. These rooms are available to allow speakers the opportunity to preview and prepare for their presentations. We highly recommend that speakers verify their laptop's compatibility with the sample LCD projector that will be located in this room, prior to their presentation. Additionally, there will be audiovisual technicians available for your assistance.

A Speaker-Ready Room will also be available in Room 307A at the Hawaii Convention Center for symposia taking place there.

Speaker Indemnification

The ideas and opinions expressed in the technical sessions, conferences, and any handout materials provided are those of the presenter. They are not those of The Electrochemical Society, The Electrochemical Society of Japan, nor of any of the technical co-sponsors; nor can any endorsement by any of the sponsoring societies be claimed.

Discussion

No recording will be made of the oral discussions. Those contributing to the discussion of a paper and desiring their remarks to be published should send the discussion to the Director of Publications, *Journal of The Electrochemical Society*, via fax: 609.737.2743. The discussion will then be referred to the author for a reply. Publication of the discussion and the comments of the author(s) depend on the publication of the paper in the *Journal*. Written discussion of a published paper should be submitted within two months following publication of the article.

No Recording Allowed

Photographing or video-recording of presentations will NOT be permitted unless specifically allowed by the speaker. Photo flash and photo floods are prohibited. Tape recordings, except on behalf of ECS, are prohibited. Anyone taking unauthorized photographs, video or audio tapes, will be asked to leave the session.

Employment Services

Companies desiring to recruit employees may place their announcements on a designated bulletin board in the registration area. Please note that these announcements should be no larger than 8 ½” by 11”.

ADA Accessibility

Special accommodations for disabled attendees will be handled on an individual basis provided that adequate notice is given to the ECS Headquarters office.
Short Courses, Tutorials, and Workshops

Six Short Courses will be offered in conjunction with PRiME 2008. These courses will be held on Sunday, October 12, 2008, from 0900h to 1630h. The registration fee is $425 for members of ECS, ECSJ, ISAP, KECS, RACI, or CSE; and $520 for nonmembers. **Students are offered a 50% discount.** The registration fee for the course covers the course, text materials, continental breakfast, luncheon, and refreshment breaks; it is not applicable to any other activities of the meeting. **The deadline for registration for a course is September 12, 2008.** Written requests for refunds will be honored only if received at Society headquarters before October 5, 2008. **Pre-registration is required.** All courses are subject to cancellation pending an appropriate number of advance registrants.

Visit the ECS website for full course descriptions and instructor biographies.

**Short Course #1**

**Basic Impedance Spectroscopy**

M. Oraziem, Instructor

This course is intended for chemists, physicists, materials scientists, and engineers with an interest in applying electrochemical impedance techniques to study a broad variety of processes. The course is best suited for an attendee who has some experience with making impedance measurements. The attendee also will develop a basic understanding of the sources of errors in impedance measurements, the manner in which experiments can be optimized to reduce these errors, and the use of regression to interpret measurements in terms of meaningful physical properties.

**Short Course #2**

**Electrodeposition of Magnetic Materials**

S. Brankovic and G. Zangari, Instructors

This course will provide attendees with a theoretical and working knowledge of the electrodeposition of magnetic materials, including soft and hard materials, and the characterization of materials and processes in the context of various technological applications.

**Short Course #3**

**Operation and Applications of Electrochemical Capacitors**

J. Miller, Instructor

Electrochemical capacitors, sometimes called supercapacitors or ultracapacitors, are receiving increased attention in power sources for many applications because they offer extraordinarily high power density compared with batteries as well as high cycle-life with maintenance-free operation. This course is targeted at technologists interested in understanding, advancing, and/or exploiting electrochemical capacitor technology.

**Short Course #4**

**Fundamentals of Electrochemistry**

J. Noël, Instructor

This course is suited to people with a physical sciences background who have not been trained as electrochemists, but who want to add electrochemical methods to their repertoire of research approaches. There are many fields in which researchers originally approach their work from another discipline but then discover that it would be advantageous to understand and use some electrochemical methods to complement the other work that they are doing.

### Symposium Topics and Organizers

**Sessions** are marked to indicate if they run on Sunday (S), Monday (M), Tuesday (Tu), Wednesday (W), Thursday (Th) and/or Friday (F).

**HC** Hard-cover (HC) editions of ECS Transactions will be available for purchase and pick-up at the meeting or you may pre-order your hard-cover ECS Transactions issue using the meeting registration form in this brochure or when registering online.

**Electronic (PDF)** editions of ECS Transactions issues will be available ONLY via the ECS Digital Library. Electronic editions of the PRiME 2008 “at” meeting issues will be available for purchase beginning October 3, 2008. Please visit the ECS website for all issue pricing and ordering information for the electronic editions.

**A—General & Tutorials**

A1 — General Student Poster Session (M) — V. Desai, G. Botte, P. Kulesza, H. Martin, V. R. Subramanian, M. Watanabe, and X. Zhang

A2 — Nanotechnology General Session (M-Th) — E. Traversa, C. Bock, J. Li, Z. Liu, G. Sandi, T. Tatsuma, and W. Van Schalkwijk

**B—Batteries, Fuel Cells, and Energy Conversion**

B1 — Battery and Energy Technology Joint General Session (T-F) — C. Walk, N. Imarishit, S. R. Narayanan, and Y. Takeda

B2 — Electrochemical Capacitors and Hybrid Power Sources (Tu-Th) — R. J. Brudd, K. M. Abraham, K. Kim, M. Morita, K. Naoi, S. Park, P. Simon, V. Srinivasan, W. Sugimoto, and K. Zaghib

B3 — High Power Batteries for Hybrid EV and Portable Power (Th-F) — Y. Chiang, Z. Ogumi, and K. Tatsumi

B4 — Intercalation Compounds for Energy Conversion and Storage Devices (M-Th) — K. Zaghib, C. M. Julien, R. Mantz, T. Ohzuku, S. Whittingham, and Y. Xia

B5 — Large Scale Energy Storage for Renewable Energy and Other Applications (W) — C. Wei, W. Cai, A. Negishi, and K. Ota

B6 — Micro Power Sources (W-F) — N. J. Dudney, G. Amatucci, and R. Kanno

B7 — Non-Aqueous Electrolytes for Lithium Batteries (M-W) — T. Jow, W. Henderson, B. Lucht, and M. Ue

B9 — Rechargeable Lithium and Lithium Ion Batteries (M-F) — A. Manthiram, T. Abe, K. M. Abraham, J. Xu, and J. Yamaki

**C—Biomedical Applications and Organic Electrochemistry**

C1 — Biological Nanostructures, Materials, and Applications (M-Tu) — M. Demirel, H. De Long, K. Kano, H. Ohno, and I. Taniguchi

(continued on page 6)
Short Course #5
Atomic Layer Deposition
A. Londergan, Instructor

Atomic Layer Deposition (ALD) can enable the precise deposition of ultra-thin, highly conformal coatings over complex 3D topography, with controlled composition and properties. Consequently, ALD has become a technology of choice for a large variety of applications for and beyond the semiconductor industry, as proven from the countless applications emerging. The first part of the course will introduce the fundamentals of ALD processing, from theoretical and empirical perspectives. ALD applications and opportunities will be covered in the second part of the course.

Short Course #6
PEM Fuel Cells
E. Stuve and H. Gasteiger, Instructors

This Short Course develops the fundamental thermodynamics and electrocatalytic processes critical to polymer electrolyte membrane fuel cells (PEMFC), including relevant half-cell reactions, their thermodynamic driving forces, and their mathematical foundations in electrocatalysis theory. Also covered will be the different functional requirements of actual PEMFC components, basic in situ diagnostics, principles of fuel cell catalyst activity measurements, the impact of uncontrolled-operation events, and the various effects of long-term materials degradation.

Corporate Tutorial
Intellectual Property: An Introduction for Research Scientists, Engineers, and Technologists
E. Jennings Taylor, Instructor

This half-day tutorial (1300-1700h) will provide an introduction to the various forms of intellectual property, trade secrets, trademarks, and copyrights with an emphasis on patents. The objective of the tutorial is to provide the electrochemist/engineer an appreciation of the patenting process and not to replace legal counsel. If you are an employee of an ECS Corporate Member organization, you are entitled to a complimentary registration to this tutorial. Please complete the registration form and return it to ECS via fax or e-mail (do not register online).

Professional Development Workshops
John R. Susko, Instructor

ECS will sponsor the following three professional development workshops at no extra charge to meeting registrants. All workshops will be held in Nautilus, Mid-Pacific. John R. Susko has been a corporate executive, entrepreneur, and chief technologist. As an entrepreneur, his work encompassed research, development, and product certification of state-of-the art energy management systems for building lighting and controls. He was a senior engineer in IBM, where he held numerous engineering and management positions in the research and development of advanced materials and technologies.

Writing an Effective Cover Letter and Resume—This informal workshop will cover the need for a cover letter, how to write it, the many “do’s” and “don’ts” in preparing such a letter, and tips for drafting an effective resume.

    Sunday, October 12, 2008 ............... 1500-1545h
    Monday, October 13, 2008 ............... 1200-1245h

Job Interviewing Tips—This informal workshop will discuss how to improve your chances of impressing the interviewer; key questions to ask; and other important pointers for the interviewing process.

    Sunday, October 12, 2008 ............... 1600-1645h
    Monday, October 13, 2008 ............... 1300-1345h

Resume Round Table—This workshop is designed to provide feedback on resumes by publicly critiquing participants’ resumes and offering suggestions on ways to make them more effective. To take full advantage of the workshop, please bring a copy of your current professional resume.

    Monday, October 13, 2008 ............... 1400-1700h

**Sunday, October 12**

**PRIME 2008 Student Mixer**
Due to the overwhelmingly positive response to the first-ever ECS Student Mixer in Phoenix, PRIME 2008 will welcome all interested students to the Hilton Hawaiian Village for this meeting's installment of the mixer. Those interested in attending this free-of-charge event must RSVP to membership@electrochem.org in advance. Join us poolside at the Tapa Café Area, Tapa, from 1730-1900h on Sunday to experience the fun and networking!

**Symposium Organizer and Co-Chair Orientation**
We encourage all Symposium Organizers and Technical Session Co-Chairs to attend this important informational session in Honolulu 1, Tapa, from 1500-1700h. The Co-Chair Orientation will take place during the first 10 minutes of the meeting.

**Sunday Evening Get-Together**
An informal get-together will be held in the Tapa Ballroom from 1930-2130h.

**Monday, October 13**

**Plenary Session**
Tetsuya Osaka, President of the Magnetics Society of Japan, and professor in the Department of Applied Chemistry, Faculty of Science and Engineering, Waseda University, Tokyo, Japan, will deliver the PRIME 2008 Plenary Lecture, “New Developments in Electrochemical Nano-Technology” at 0800h in the Tapa Ballroom. There will be recognition of other award winners at the Plenary Session as well.

**Coffee Break**
Immediately following the Plenary Session at 0930h, a coffee break will be held in the Palace Lounge, Tapa.

**ECS 2008 Edward Goodrich Acheson Award Lecture**
Robert P. Frankenthal, recipient of the ECS 2008 Edward Goodrich Acheson Award, will deliver his talk entitled “Passive Films: Their Growth and Properties,” at 1400h in the Critical Factors in Localized Corrosion 6 Symposium in Sea Pearl 4/5/6, Mid-Pacific.

**Monday Evening Mixer, Student Poster Session, and Technical Exhibit**
Along with the grand opening of the Technical Exhibit, an informal gathering will be held in the Coral Exhibit Hall, Mid-Pacific, from 1800-2030h. Beer, soft drinks, and snacks will be served on a complimentary basis. The General Student Poster Session will be held as a part of the Monday Evening Mixer. Formal presentations will begin at 1800h. (Students may start setting up their posters in the Coral Exhibit Hall at 1400h; judging of the posters will begin at 1700h.) All General Student Poster Session participants are encouraged to attend the Technical Exhibit on Tuesday at 1200h where the winners will be announced and given an award plaque. The Technical Exhibit will feature instruments, materials, systems, publications, and software of interest to meeting attendees. All meeting registrants are invited to attend.

**Tuesday, October 14**

**ECS Hot Topic Breakfast on Technology Transfer**
The practical application of university-developed technology is desirable, if not required, to illustrate benefits of this work to the public and the university’s stakeholders. Points covered will include the drivers for these activities, potential mechanisms for universities to illustrate added value to the private sector, and methods for industry to ensure that partnerships universities result in mutually beneficial outcomes. This event is by invitation only; contact membership@electrochem.org for more details.

**Technical Exhibit**
The Technical Exhibit will be held in the Coral Exhibit Hall, Mid-Pacific, from 0900-1400h and again from 1800-2030h, along with the evening's Poster Session. The exhibit will feature instruments, materials, systems, publications, and software of interest to attendees. The coffee break is scheduled for 0930h in the Coral Exhibit Hall, Mid-Pacific, on Tuesday and Wednesday to allow meeting attendees additional time to browse through the exhibits.

**Coffee Break**
A coffee break will be held from 0930-1000h in the Coral Exhibit Hall, Mid-Pacific. A coffee break will also be held at the Hawaii Convention Center for symposia taking place there.

**Student Poster Award Presentation and Complimentary Lunch**
Winners of the General Student Poster Session will be announced at 1200h at the Technical Exhibit in the Coral Exhibit Hall, Mid-Pacific. A complimentary lunch will be served to the first 500 attendees.

**Technical Exhibit and Evening Poster Session**
The Technical Exhibit will again be open in conjunction with the Tuesday General Poster Session in the Coral Exhibit Hall, Mid-Pacific, from 1800-2030h.

**ECS Edward Goodrich Acheson Award Reception**
All meeting registrants are invited to attend the award reception honoring Robert P. Frankenthal, recipient of the ECS 2008 Edward Goodrich Acheson Award, at 1800-1845h, in the Tapa Café area, Tapa.

**ECS Max Bredig Award in Molten Salt Chemistry Banquet and Address**
Beginning at 1800h, a dinner will be held in Iolani 5/6/7, Tapa, to honor Bernard Gilbert, recipient of the 2008 Max Bredig Award. Following dinner, he will deliver his talk entitled, “Molten Salts and Ionic Liquids as Solvents: A Combined Study by Vibrational Spectroscopy and Electrochemistry.” Tickets are sold separately for $55 in advance or $65 onsite, subject to availability, and are nonrefundable.

**ECS Newman Symposium Reception**
A reception will be held in honor of Professor John Newman’s 70th Birthday at 1830h on the Rainbow Patio, Rainbow Tower. Tickets are sold separately for $12 in advance or $14 onsite, subject to availability, and are nonrefundable.

**Wednesday, October 15**

**Technical Exhibit**
The Technical Exhibit will be held in the Coral Exhibit Hall, Mid-Pacific, from 0900-1400h in conjunction with a coffee break at 0930h, and again from 1800-2030h along with the evening’s Poster Session. The exhibit will feature instruments, materials, systems, publications, and software of interest to attendees.

**Coffee Break**
A coffee break will be held from 0930-1000h, in the Coral Exhibit Hall, Mid-Pacific. A coffee break will also be held at the Hawaii Convention Center for symposia taking place there.

**Technical Exhibit and Evening Poster Session**
The Technical Exhibit will again be open in conjunction with a general poster session in the Coral Exhibit Hall, Mid-Pacific, from 1800-2030h.
**General Functions**

**ECS Corrosion Division Award Reception**
The Corrosion Division will hold its annual Award Reception at 1800h in Iolani 5/6/7, Tapa. Tickets are sold separately for $12 in advance or $14 onsite, subject to availability, and are nonrefundable.

**ECS Battery Division Award Reception**
The Battery Division Award Reception will be held at 1900h in the Shell Bar off the Main Lobby. Tickets are sold separately for $12 in advance or $14 onsite, subject to availability, and are nonrefundable.

**ECS Toshio Shibata Symposium Banquet**
A banquet will be held in honor of Toshio Shibata at 1900h in South Pacific 1, Mid-Pacific. Tickets are sold separately for $55 in advance or $65 onsite, subject to availability, and are nonrefundable.

**Thursday, October 16**

**Coffee Break**
A coffee break will be held from 0930-1000h at various locations nearby technical sessions. A coffee break will also be held at the Hawaii Convention Center for symposia taking place there.

**Luau on the Lagoon Green**
Please plan to join us at 1830h on the Lagoon Green for this traditional Hawaiian celebration! Each guest will first be welcomed to a reception by a Polynesian hostess with a festive island drink and lei, then seated for the luau feast, complete with Lomi Lomi Salmon, Kalua Pig, Mahi Mahi, and other island delights. The evening culminates in a spectacular Polynesian show you won’t want to miss! Tickets are required and are $39 in advance, and $49 onsite. Space is limited, so please purchase your tickets early!

**Friday, October 17**

**Coffee Break**
A coffee break will be held from 0930-1000h at various locations nearby technical sessions.

---

**Luncheons, Business Meetings, and Special Events**

All luncheon and special event tickets are nonrefundable and should be purchased in advance. Tickets are priced as follows:

- Luncheons, $27 in advance, $32 onsite
- Receptions, $12 in advance, $14 onsite
- Banquets, $55 in advance, $65 onsite
- Luau, $39 in advance, $49 onsite

**Sunday, October 12**

1900h ...... ECS Electronics & Photonics Division Award Reception & General Meeting, Honolulu 2/3, Tapa (No ticket required)

**Monday, October 13**

1215h ...... ECS Battery Division Luncheon & Business Meeting, South Pacific 4, Mid-Pacific
1215h ...... ECS High Temperature Materials Division Luncheon & Business Meeting, Nautilus 2, Mid-Pacific

**Tuesday, October 14**

1215h ...... ECS Corrosion Division Luncheon & Business Meeting, Iolani 5/6/7, Tapa
1215h ...... ECS Sensor Division Luncheon & Business Meeting, Iolani 3/4, Tapa
1800h ...... ECS Edward Goodrich Acheson Award Reception, Tapa Café Area, Tapa (No ticket required)
1800h ...... ECS Max Bredig Award in Molten Salt Chemistry Banquet and Address, Iolani 5/6/7, Tapa
1830h ...... ECS Newman Symposium Reception, Rainbow Patio, Rainbow Tower

**Wednesday, October 15**

1215h ...... ECS Electrodeposition Division Luncheon & Business Meeting, Tapa Café Area, Tapa
1215h ...... ECS Luminescence & Display Materials Division Luncheon & Business Meeting, Iolani 6, Tapa
1800h ...... ECS Corrosion Division Award Reception, Iolani 5/6/7, Tapa
1900h ...... ECS Battery Division Award Reception, Shell Bar, Main Lobby
1900h ...... Toshio Shibata Symposium Banquet, South Pacific 1, Mid-Pacific

**Thursday, October 16**

1830h ...... Luau, Lagoon Green
Sunday, October 12

1500h ..... ECS Electronics & Photonics Division Subcommittee on Compound Semiconductors, Rainbow 3, Rainbow Tower
1500h ..... ECS Electronics & Photonics Division Subcommittee on ULSI Science & Technology, Rainbow 2, Rainbow Tower
1600h ..... ECS Interface Advisory Board, Nautilus 2, Mid-Pacific
1600h ..... ECS Nominating Committee, Ilima Boardroom, Kalia
1700h ..... ECS Electronics & Photonics Division Symposium Planning & Technical Directions Subcommittee, Rainbow 3, Rainbow Tower
1700h ..... ECS Dielectric Science & Technology Division Governing Body / Long Range Planning Committee & Symposium Planning Meeting, Rainbow 1, Rainbow Tower
1700h ..... ECS Corrosion Division Executive Committee, Iolani 3, Tapa
1700h ..... ECS Physical & Analytical Electrochemistry Division Symposium Planning Committee, Iolani 4, Tapa
1730h ..... ECS Fuel Cell Subcommittee, Iolani 5, Tapa
1800h ..... ECS Battery Division Executive Committee & Symposium Planning Subcommittee, Rainbow 2, Rainbow Tower
1900h ..... ECS Council of Sections, Honolulu 1, Tapa
1900h ..... ECS Electronic & Photonics Division Award Reception & General Meeting, Honolulu 2/3, Tapa
1930h ..... ECS Luminescence & Display Materials Division Executive Committee, Rainbow 3, Rainbow Tower
2000h ..... ECS Sensor Division Executive Committee, Ilima Boardroom, Kalia
2000h ..... ECS Electronics & Photonics Division Executive Committee, Iolani 6/7, Tapa

Monday, October 13

0700h ..... ECS High Temperature Materials Division Executive Committee, Iolani 6/7, Tapa
0700h ..... ECS Industrial Electrochemistry & Electrochemical Engineering Division Executive Committee, Ilima Boardroom, Kalia
0700h ..... ECS Physical & Analytical Electrochemistry Division Executive Committee, Iolani 4, Tapa
0930h ..... ECS Gordon Moore Award Nominating Committee, Iolani 5, Tapa
1030h ..... ECS Development Committee, Tiare Suite, Kalia
1330h ..... ECS Education Committee, Iolani 6, Tapa
1500h ..... ECS New Technology Subcommittee, Ilima Boardroom, Kalia
1530h ..... ECS Transactions Editorial Board, Iolani 4, Tapa
1600h ..... ECS Solid State Divisions Chairs Meeting, Iolani 3, Tapa
1600h ..... ECS Honors & Awards Committee, Ilima Boardroom, Kalia
1630h ..... ECS ESL Advisory Board, Iolani 5, Tapa
1630h ..... ECS Society Meeting Committee, Iolani 6, Tapa
1700h ..... ECS European Section Executive Committee, Nautilus 2, Mid-Pacific
1800h ..... ECS European Section Meeting, Kahili 1/2, Kalia
1900h ..... ECS Electrodeposition Division Executive Committee, Iolani 5, Tapa
1900h ..... ECS Energy Technology Division Executive Committee, Ilima Boardroom, Kalia

Tuesday, October 14

0700h ..... ECS JES/ESL Editorial Board, Iolani 3/4, Tapa
0700h ..... ECS Symposium Subcommittee, Iolani 5/6/7, Tapa
0730h ..... ECS Council of Past Presidents, Ilima Boardroom, Kalia
0900h ..... ECS Publication Committee, Iolani 3/4, Tapa
1000h ..... ECS Individual Membership Committee / Division / Section Representatives, Ilima Boardroom, Kalia
1400h ..... ECS Technical Affairs Committee, Ilima Boardroom, Kalia
1600h ..... ECS Finance Committee, Ilima Boardroom, Kalia

Wednesday, October 15

0730h ..... ECS Corporate Membership Committee, Iolani 3, Tapa
1000h ..... ECS Ways & Means Committee, Ilima Boardroom, Kalia
1215 ..... ECS Financial Policy Advisory Committee, Iolani 7, Tapa
1400h ..... ECS Development Solicitation Subcommittee, Iolani 3, Tapa

Thursday, October 16

0900h ..... ECS Board of Directors Meeting, Iolani 5/6/7, Tapa
PRIME Meeting Program • October 12-17 • Honolulu, HI
Shuttle Service to the Hawaii Convention Center (HCC)
Complimentary shuttle service will be provided between the Hilton Hawaiian Village and the Hawaii Convention Center Monday through Thursday. Schedule information and walking maps will be available in the registration area.
Electrochemical nanotechnology has produced a variety of materials with the nanometer scale. These nano-scale materials have made it possible to miniaturize electric devices, and they are fascinating because of their attractive characteristics, which are remarkably different from bulk materials. Prof. Osaka and his group have been conducting their research based on the philosophy of “creating new designs for the interface between solution and electrode at an atomic scale.” They began to work with this new philosophy in 1981 to develop high performance magnetic recording media, which was followed by their recent development of a head material consisting of electrodeposited CoNiFe. Nowadays, the above philosophy has become common not only in electrochemical wet technologies but also in dry technologies.

This philosophical idea is applied also to nano-biotechnology, and it plays an important role in the area of health care including biomedicine and bioanalysis. The interaction between electrochemical nanotechnology and biotechnology is now creating one of the most notable and fascinating new technologies.

TETSUYA OSAKA is a professor in the Department of Applied Chemistry, Faculty of Science and Engineering, Waseda University, Tokyo, Japan, a position he has held since 1986. He received his BS degree in 1969, a master's degree in engineering in 1971, and his doctoral degree in engineering in 1974 from Waseda University.

His research fields are electrochemical technology and recent work focuses on “electrochemical nanotechnology,” including electro- and electroless-deposition/surface finishing, electronic packaging materials, magnetic storage and energy storage devices, and chemical/bio-sensors.

Dr. Osaka is currently President of the Magnetics Society of Japan. He previously served as President of The Electrochemical Society of Japan, President of the Japan Institute of Electronic Packaging, and Vice-President of The Electrochemical Society of Japan.

His technical contributions have been recognized by many awards such as Prizes for Science and Technology in the Development Category of the Commendation for Science and Technology from the Minister of Education, Culture, Sports, Science, and Technology in 2008; Society Award of the Magnetics Society of Japan in 2006; Society Award of Chemical Society of Japan in 2004; Pergamon Electrochimica Acta Gold Medal of ISE in 1998; Society Award of The Electrochemical Society of Japan in 2001; Society Award of the Surface Finishing Society of Japan in 1999; Simon Wernic International Award of the International Union for Surface Finishing in 1996; and the Research Award of the ECS Electrodeposition Division in 1996.

This presentation will summarize work on the formation and breakdown of passive films on metals and alloys used primarily in the electronics industry. Rate laws, film thickness, and film composition as a function of temperature will be emphasized.

ROBERT P. FRANKENTHAL was a Distinguished Member of Technical Staff at Bell Laboratories, now part of Lucent Technologies, before retiring in 1996. He earned his BS degree in chemistry from the University of Rochester in 1952 and his PhD degree in analytical chemistry from the University of Wisconsin in 1956, where he was a Procter and Gamble Fellow in 1954-1955.

Upon graduation, Dr. Frankenthal joined the Applied Research Laboratory of U.S. Steel Corp. to work on the corrosion of tin and tin plate. In 1960 he transferred to U.S. Steel’s E. C. Bain Laboratory for Fundamental Research, where he conducted research on the passivation and localized corrosion of iron and ferrous alloys and the application of new surface analytical and electrochemical techniques to corrosion research.

Dr. Frankenthal joined Bell Laboratories in 1972 to study the corrosion and passivation of metals and the protection and reliability of electronic materials and devices. In 1983, he received the Distinguished Technical Staff Award for Sustained Achievement from Bell Laboratories. His work has resulted in more than 100 publications and 8 patents. He is the co-editor of Passivity of Metals, a volume in The Electrochemical Society Corrosion Monograph Series, and numerous proceedings volumes.

Dr. Frankenthal has been a member of ECS since 1956 and has served it at all levels. He was Chair of the Pittsburgh Section (1963-1964), Chair of the Corrosion Division (1980-1982), ECS Treasurer (1986-1990), ECS Vice-President (1990-1993), and ECS President (1993-1994). He was a Divisional Editor for Corrosion of the Journal of The Electrochemical Society for 12 years and has chaired or been a member of most ECS committees. Most recently he chaired the ad hoc ECS Centennial Committee.

Dr. Frankenthal has been the recipient of numerous other honors. He was elected an ECS Fellow in 1995 and an ECS Honorary Member in 2003. He received the H. H. Uhlig Award of the ECS Corrosion Division in 1989 and was honored by the Division with a symposium and proceedings volume, Corrosion Science: A Retrospective and Current Status in Honor of Robert P. Frankenthal” in 2002. He was also elected a Fellow of NACE International in 1994 and received that society’s Willis R. Whitney Award in 1997.

Dr. Frankenthal has also been active in various elected and appointed positions in other societies, most recently as Editor-in-Chief of the Journal of Materials Research (1998-2001) for the Materials Research Society.

ECS 2008 Acheson Award Reception—All meeting attendees are invited to attend the award reception honoring Robert P. Frankenthal on Tuesday, October 14, 1800-1845h, in the Tapa Café Area, Tapa Tower (no ticket required).

(continued on next page)
ECS Charles Tobias Young Investigator Award

Yang Shao-Horn will receive the ECS Charles Tobias Young Investigator Award at the Plenary Session on Monday, October 13, starting at 0800h in the Tapa Ballroom, Tapa Tower.

Yang Shao-Horn is an associate professor in the Department of Mechanical Engineering and Department of Materials Science and Engineering at MIT. She works with graduate students and postdocs on materials for electrochemical energy storage and conversion, which is centered on understanding and altering the crystal, surface, and electronic structures of thin films and nanomaterials, and applying fundamental understanding to design new materials for lithium storage and electrocatalysis of small molecules such as oxygen reduction, water splitting, and methanol oxidation. Her research on lithium storage materials has led to a fundamental understanding of the origin of structural and surface instability of materials during cycling, and strategies to alter structures and surfaces to increase lithium battery energy and to minimize energy loss over battery lifetime. Recent work from her research team has identified the mechanism of activity loss and Pt nanoparticle instability in proton exchange membrane fuel cells, and has revealed atomically resolved compositions and surface atomic structures of Pt and Pt alloy nanoparticles that govern specific activity for CO oxidation, methanol oxidation, or oxygen reduction.

She obtained her PhD in metallurgical and materials engineering from Michigan Technological University in 1998. She then worked as a staff materials scientist at Eveready Battery Company in their Advanced Technology and Materials Group from 1998-2000. She joined MIT in August 2002 after a two-year postdoc study at the Institute of Condensed Matter Chemistry in Bordeaux, France. Her select honors include the Dupont Young Faculty Award (2006); MIT Presidential Energy Research Council (2005-2006); the Office of Naval Research Young Investigator Award (2003); Atlantic Richfield Career Development Professorship (2002-2005); NSF International Research Fellow Award (2000-2002); the ECS Norman Hackerman Young Author Award (1998); and the ECS Battery Division Student Research Award of the ECS (1997).

2008 Class of ECS Fellows

The ECS Class of Fellows will be recognized at the Plenary Session on Monday, October 13, starting at 0800h in the Tapa Ballroom, Tapa Tower.

For his outstanding ability to combine fundamental and applied aspects of his research in the field of non-aqueous batteries and for his numerous innovations in this area.

Doron Aurbach has been a full professor in the Department of Chemistry and a Senate member at Bar Ilan University (BIU), Ramat Gan, Israel, since 1996. He obtained his BSc in both chemistry and chemical engineering and his PhD in physico-organic chemistry. He chaired the chemistry department at BIU during 2001-2005. He is an associate editor of two electrochemistry journals: Electrochemical and Solid-State Letters and the Journal of Solid State Electrochemistry. He founded the electrochemistry group of BIU at the end of 1985. The group includes 30 researchers (one of the largest research groups in Israel) and works in the following fields: Li-ion batteries (new cathodes, anodes, electrolytes, electrodes-solution interactions, practical systems), rechargeable magnesium batteries, electronically conducting polymers, supercapacitors, engineering of new carbonaceous materials, sensors, and water desalination. The group currently collaborates with several prominent research groups in Europe and the U.S. and with several commercial companies.

Prof. Aurbach published more than 310 journals papers (electrochemistry, physical chemistry, materials and surface science), a book (Nonaqueous Electrochemistry by Marcel Dekker, New York, 1999), 12 chapters in books, 12 patents, and 250 extended abstracts related to more than 100 international meetings. After their graduate studies and research in his group, under his supervision, 22 scholars have received their PhDs and 24 scholars have received their MSc degrees. He chairs the ECS Israel Section. He received the 2005 ECS Battery Division 2005 Technology Award and the 2007 Research Award of the Israel Vacuum Society.

For insightful contributions to synthetic, mechanistic, and computational aspects of organic electrochemistry via his publications, reviews, and books; for service to ECS as a contributor to and organizer of numerous symposia; as a member and officer of the Organic and Biological Electrochemistry Division; and for distinction as the 2008 recipient of the Manuel M. Baizer Award.

Albert J. Fry earned a BS from the University of Michigan in 1958 and a PhD in organic chemistry from the University of Wisconsin in 1963. After a postdoctoral year at Caltech with George S. Hammond, he joined the faculty of Wesleyan University, in Middletown, Connecticut, where he is now the Elisha B. Nye Professor of Chemistry.

Fry became fascinated by organic electrochemistry shortly after joining the Wesleyan faculty. Early research was on the mechanism of electrochemical reduction of alkyl halides, including geminal halides, ,α,α'-dibromoketones, 1,3-dihalides, benzylic and benzal dihalides, and dihalocyclopropanes. The discovery that reduction of dibromoketones could be induced by mercury metal under ultrasonic irradiation (the first reported organic chemical reaction effected by ultrasound) led to a series of papers comparing electrochemical reduction with the reaction with ultrasonically dispersed mercury. More recently, the Fry group has been studying the electrocatalytic oxidation of monosilanes and disilanes, alkenes, cyclooctatetraenes, and arylalkanes, and developing new high oxidation potential electrocatalysts to carry out such oxidations. Another area of research over the last six years has been computational electrochemistry, i.e., the application of quantum chemical methods to understand problems in organic electrochemistry, including ion-pairing and solvation effects upon the electrochemical behavior of polycyclic aromatic hydrocarbons, the electrochemical oxidative and reductive behavior of cyclooctatetraene, and substituent effects on the electrochemical reduction and oxidation of aromatic substrates. The research has been described in 145 research papers and three books. Prof. Fry is Vice-Chair of the ECS Organic & Biological Electrochemistry Division and a (very) amateur musician.

18
For key contributions to the in-depth characterization and analysis of electrochemical systems including proton exchange membrane fuel cells and high temperature electrochemical sensors; for applying the knowledge to the development of robust sensors and improved fuel cell durability; and for his dedicated service to ECS.

FERNANDO GARZON is the Technical Team Leader for High Temperature Materials Chemistry in the Electronic and Electrochemical Materials Group (MST-11) of Los Alamos National Laboratory. He received his BSE in metallurgy and materials science from the University of Pennsylvania in 1982 and completed his PhD in materials science and engineering in 1988. After completing a Los Alamos postdoctoral fellowship under Ian Raistrick, he was promoted to the technical staff in 1990.

His research interests include fuel cell technology, the development of advanced gas sensors, electronic conducting transition metal oxides, thin film growth, ceramic membrane technology, and solid-state ionic. Fernando Garzon has co-authored over 100 peer reviewed scientific publications with more than 1,100 citations, served as a co-editor for the ECS proceedings series, Solid State Ionic Devices, and has given numerous invited conference presentations. Research highlights include: the first experimental determination of the thermodynamic metastability of high temperature superconductors published in the journal Science; the development of very low surface resistance superconductor thin films for microwave applications, and the development of non-porous ceramic hydrogen separation membranes. He is the inventor of a 1999 R&D 100 award-winning high temperature combustion control sensor, and a new class of solid-state gas sensors for hydrocarbons, carbon monoxide, and nitric oxides. He holds seven patents in electrochemical materials technology and has three more pending.

Fernando Garzon is a past Chair of the ECS High Temperature Materials Division and served on the ECS Board of Directors from 2001-2003. He is an avid bicyclist and enjoys playing obsolete archaic instruments in the Hieronymus Bosch Quartet.

For the development of new nanostructured carbon materials with tunable structure and properties, which advanced the area of electrochemical capacitors; and for major contributions to understanding high-temperature corrosion of non-oxide ceramics.

YURY GOGOTSI is a professor of materials science and engineering at Drexel University in Philadelphia, PA. Prior to joining Drexel University, he served on the faculty of the University of Illinois at Chicago from 1996 to 2000. He also holds a courtesy appointment in the Department of Mechanical Engineering and Mechanics and serves as Director of the A. J. Drexel Nanotechnology Institute. He acted as an Associate Dean of the College of Engineering from 2003 to 2007. Yury Gogotsi received his MS (1984) and PhD (1986) degrees from Kiev Polytechnic in Ukraine and a DSc degree from the Ukrainian Academy of Science in 1995. After graduation from Kiev Polytechnic, he performed post-doctoral studies at the University of Karlsruhe, Germany (A. von Humboldt Fellowship), Tokyo Institute of Technology, Japan (JSPS Fellowship), and University of Oslo, Norway (NRC/NATO Fellowship).

Prof. Gogotsi is known for his pioneering work on high-temperature corrosion of engineering ceramics, phase transformations in ceramics and semiconductors induced by contact loading, hydrothermal synthesis of carbon and studies of liquids in carbon nanotubes. His current research interests include nanoporous carbide-derived carbons for electrochemical capacitors and other energy-related applications, synthesis and chemical modification of carbon nanotubes and nanodiamond, as well as in situ characterization of nanomaterials using Raman spectroscopy and electron microscopy techniques. He co-authored two books, edited twelve books, obtained more than 20 patents, and co-authored more than 280 research papers.

Prof. Gogotsi has received numerous awards for his research including S. Somiya Award from the International Union of Materials Research Societies, the Kuczynski Prize from the International Institute for the Science of Sintering, an R&D 100 Award from R&D Magazine, the I. N. Frantsevich Prize from the Ukrainian Academy of Science, and the Roland B. Snow Award from the American Ceramic Society (three times). He has been elected a Fellow of the American Ceramic Society, Academician of the World Academy of Ceramics, and Full Member of the International Institute for the Science of Sintering. He serves as an editor of the journal Carbon and is on the editorial board of several other journals.

For international leadership in the design and implementation of the medical-grade lithium batteries, which now power most of the implantable cardiac pacemakers and defibrillators, and which have now been implanted in more than 4 million persons around the world.

CURTIS F. HOLMES received his BS in chemistry from Louisiana State University and his PhD in chemical physics from Indiana University. He has had experience in both theoretical and applied aspects of chemical research. Since 1976, he has been active in research and development of lithium batteries.

Dr. Holmes joined Greatbatch, Inc, a manufacturer of lithium batteries and other components for biomedical implantable devices, in 1976 and has held the positions of Vice-President of Technology and Senior Vice-President. His responsibilities included process and product quality, regulatory affairs, reliability, intellectual property, and research and development. He has participated in a variety of research and development projects for the development of advanced batteries for implantable biomedical devices. Among the projects he has participated in are the improvement of efficiency and reliability of lithium/iodine pacemaker batteries, the development of medium-rate batteries for implantable drug delivery systems and neurostimulators, and the development of high-rate lithium batteries for the implantable defibrillator. In 1999 Dr. Holmes relocated to Greatbatch-Hittman, Inc. in Columbia, MD, a subsidiary of Greatbatch, Inc., where he served as President. In 2001 he became Group Vice-President, Components, with responsibilities for divisions of the company in Clarence, NY, Carson City, NV, and Columbia, MD. In 2004 he returned to Western New York to become Greatbatch’s Chief Technology Officer, a position he held until his retirement in December 2006. He is now a consultant for Greatbatch, Inc.

A frequent participant in scientific conferences, Dr. Holmes has organized or chaired technical sessions for ECS, the Annual Conference on Battery Applications and Advances, and several of the International Meetings on Lithium Batteries. In 1997 he was invited to present the Bourner Lecture at the International Power Sources Symposium in Brighton, UK.

He has served as Secretary, Vice-Chair, and Chair of the ECS Battery Division and is a member of the Technical Affairs Committee of that society. He has also served as chair of the Society’s Publication Committee. He is a member of the AAMI Pacemaker Committee. He was elected a Fellow of the American Institute for Medical and Biological Engineering in 1996. Dr. Holmes has authored over 50 technical papers and six book chapters, and he holds three U.S. patents.
To recognize his contributions in designing nanostructure assemblies for solar cells, fuel cells, and photocatalysis; and for his outstanding service to ECS.

**Prashant V. Kamat** is currently a professor of chemistry and biochemistry, a Senior Scientist at the Radiation Laboratory, and a concurrent professor in the Department of Chemical and Biomolecular Engineering at University of Notre Dame. A native of Binaga, India, he earned the master's (1974) and doctoral degree (1979) in physical chemistry from the Bombay University, and carried out his postdoctoral research at Boston University (1979-1981) and the University of Texas at Austin (1981-1983). He joined the Notre Dame Radiation Laboratory in 1983 and initiated the photoelectrochemical investigation of semiconductor nanoparticles. His scholarly activities in the area of photoelectrocatalysis and energy conversion have received worldwide recognition.

Dr. Kamat is a highly prolific and eminent member of the ECS community. He has served as a Chair of the ECS Fullerene Group (2002-2004) and the ECS Fullerene, Nanotubes, and Carbon Nanostructures Division (2004-2008), a member of the Finance Committee, New Technology Subcommittee, the Nanotechnology Subcommittee, and Fuel Cells Subcommittee. He is currently serving as a member of the Honors and Awards Committee. He is a member of the advisory board of the society journals, *Interface* and *Electrochemical and Solid-State Letters*. In addition to his ECS roles, he also serves as the Executive Editor of the *Journal of Physical Chemistry* A/B/C.

Dr. Kamat is one of the prominent researchers in the area of light energy conversion. He recognized the potential of semiconductor and metal nanostructures in the early ‘80s in developing next generation solar cells. He has successfully employed inorganic–organic hybrid nanoassemblies and quantum dots in photoelectrochemical solar cells. Dr. Kamat’s research has made significant contributions to three areas: (1) photocatalysis with semiconductor and metal nanostructures; (2) designing inorganic–organic hybrid assemblies for next generation solar cells; and (3) environmental remediation using advanced oxidation processes and chemical sensors. He has directed DOE funded solar photocatalysis research for the more than two decades. He has published more than 350 peer-reviewed journal papers, review articles, and book chapters, and has received over 13,000 citations for his published work (h-index 63). He was a Fellow of Japan Society for Promotion of Science during 1997 and 2003 and was presented with the 2006 Honda-Fujishima Lectureship Award by the Japan Photochemical Society.

For service to ECS and for sustained and considerable contributions in many areas including passivity, porous semiconductors, and nanostructuring of surfaces.

**Patrick Schmuki** is a professor of materials science and holds the Chair for Surface Science and Corrosion at the University of Erlangen-Nuremberg, Germany. Dr. Schmuki studied physical chemistry at the University of Basel in Switzerland (MSc, 1988), and carried out his graduate studies on “Semiconductive Properties of Passive Films” at the Swiss Federal Institute of Technology, ETH-Zürich (PhD degree in 1992). After employment as a research associate at the ETH-Z (1992-1994) he worked at the Brookhaven National Laboratory, NY, USA, using synchrotron techniques for in situ X-ray absorption studies on thin film electrochemical reactivity (1994-95).

From 1995-1997 he was a guest scientist at the Institute for Microstructural Sciences of the National Research Council of Canada in Ottawa, where his research focused on surface phenomena on Si and III-V semiconductors. In 1997 he was appointed an Associate Professor (MER) for Microstructuring of Materials at the Department of Materials Science of EPFL Lausanne. In the fall of 2000, he joined the Department of Materials Science (Faculty of Engineering) at the Friedrich-Alexander University Erlangen-Nuremberg as a full professor and head of the institute.

Dr. Schmuki has published more than 200 research papers and has given more than 50 invited lectures at international meetings. He received several international awards in materials science and electrochemistry. His key expertise is in using electrochemistry within the materials science field, particularly, addressing micro-/nanostructures, surfaces/interfaces, thin film characterization, photochemistry, semiconductor chemistry, and materials durability. Of particular interest are highly functional materials surfaces including interfaces between inorganic and organic matter and nanoscale phenomena such as manipulation and self-organization on a mesoscopic size scale.

Prof. Schmuki is active in various professional societies such as ECS, the International Society of Electrochemistry, the Society for Porous Semiconductor Science and Technology, and the International Corrosion Council. Within ECS, he most recently served as Chair of the Corrosion Division as well as Chair of the European Section. He organized and initiated various symposia among them the successful series on “Pits and Pores and Their Significance for Advanced Materials.”

For outstanding technical leadership and fundamental contributions to the science of electrodeposition.

**Gerry R. Stafford** is a research scientist at the National Institute of Standards and Technology in Gaithersburg, MD. He earned his BS in chemical engineering from the University of Notre Dame and his PhD in materials science from the University of Virginia. From 1980 to 1986 he was a senior research engineer with Celanese Research Co., Summit, NJ, where he worked on electrogenerative processes and the development of polymeric separator materials for batteries and fuel cells. He joined NIST in 1986 and served as the Leader of the Electrochemical Processing Group from 1994 to 2005.

Dr. Stafford’s research interests focus on the application of electrochemical and analytical methods to understand electrodeposition processes. Much of his research has been devoted to the study of aluminum alloy electrodeposition from chloroaluminate ionic liquids. He established the key processing–structure–property relationships that led to the deposition of a wide variety of aluminum-transition metal alloy structures ranging from intermetallic compounds to quasicrystals and metallic glasses, some of which show exceptional corrosion resistance. In 1988 he received the U.S. Department of Commerce Bronze Medal for his work in this area. In 2001 he was co-recipient of the U.S. Department of Commerce Gold Medal for the group’s work on superconformal film growth used in semiconductor metallization. More recently he has developed an in situ wafer curvature method for studying surface and growth stress with resolution sufficient to study the adsorption of molecular monolayers onto the electrode surface. These measurements are particularly well-suited for studying underpotential metal deposition, self-assembled monolayers, and competitive adsorption processes.

Dr. Stafford has been an active member of ECS for 30 years. He has co-organized several symposia in the areas of molten salt chemistry and electrochemical processing for microelectronics, and is the co-editor of seven ECS proceedings volumes. He is an author or coauthor of over 75 technical papers, a book chapter on the electrodeposition of aluminum alloys from chloroaluminate ionic liquids, and holds two U.S. patents. He is also a member of the Materials Research Society and the American Chemical Society. He has served on the editorial board of *Metallurgical and Materials Transactions*, and in 1998 he chaired the Gordon Research Conference on Electrodeposition. He currently serves as Chair of the ECS Electrodeposition Division.

(continued on next page)
For a career of pioneering and innovative work in both aqueous and solid-state electrochemical detectors and sensor arrays, which have enabled life saving gas detection equipment, instruments to protect human health and the environment, and novel electrochemical methods, for which he has been recognized by numerous awards.

JOSEPH R. STETTER has been Laboratory Director of the Microsystems Innovation Center at SRI International in Menlo Park, CA since 2004. He runs the MEMS fab and leads a MEMS R&D team with programs in vacuum microelectronics, bio-MEMS, and sensors. Dr. Stetter is also a research professor at Illinois Institute of Technology where he collaborates with the International Center for Sensor Science and Engineering, which he founded while at IIT. He has held positions as VP Engineering for Nanomix Inc.; section head and group leader at ANL; director of R&D at ES Division of Becton Dickenson and Co.; and is currently acting President of KWJ Engineering Inc., his second start-up company specializing in chemical and biochemical sensors with applications in the protection of human health and the environment. Sensor products designed by Stetter are still in use throughout the world.

Dr. Stetter has won several prestigious awards for his work in sensor research, instrument development, and technology transfer including the “2002 Entrepreneur of the Year" award given by TMAC (Technology Management Association of Chicago). He is the author of more than 100 refereed journal articles and books, holds more than 30 patents, has edited journals, chaired international conferences, been a plenary speaker at conferences, and is active in professional societies being past chair of the ECS Sensor Division. Stetter earned his PhD in physical chemistry from the State University of New York at Buffalo in 1975 and serves on the board of several startups.

For pursuit of a fundamental atomic level understanding of electrodeposition.

JOHN STICKNEY received his BS in chemistry from Humboldt State University in 1981, and a PhD in chemistry from the University of California, Santa Barbara, in 1984. He worked under the direction of Arthur Hubbard, and his dissertation was titled “Metal Deposition on Well-Defined Platinum Electrodes.” That work involved the first studies of the surface structures formed by underpotential deposition (UPD). He then joined the faculty of the University of Georgia in 1985 as an assistant professor with an appointment in chemistry.

Prof. Stickney’s work with Hubbard at UCSB taught him to respect the electrode surface, and how important it was to reactivity. He took those ideas with him to UGA where he began a program to study Cu single crystal surfaces in aqueous electrolytes, with the idea that to understand electrodeposition you must first understand the substrate structure, and Cu was a substrate of great importance in electrodeposition. During that time he learned of the existence of atomic layer epitaxy (ALE) from Mike Norton, and was encouraged to find out if UPD could be applied. This resulted in a redirection of his research efforts, and a patent in 1994. ALE is a subset of atomic layer deposition (ALD), and the development of electrochemical ALD has since been the focus of his research. ALD is the use of surface limited reactions to form deposits an atomic layer at a time. Control over the surface chemistry is critical to development of ALD. Initial studies concerned compounds of importance in photovoltaics, such as CdTe: the cycle being UPD of Cd on Te, and then UPD of Te on Cd.

More recently, with the development of surface limited galvanic displacement by Adzic, Brankovic, et al., it has proven possible to form elemental nanofilms as well as compounds, greatly expanding the applicability of ALD. Recently, Prof. Stickney started a small company (Electrochemical ALD L.C.) to produce ALD equipment and is exploring the range of materials that can be formed by ALD. His work focuses on chemistry at the interfaces of metals, semiconductors, etc.

For his pioneering work in developing micromechanical sensor platforms for chemical and biological detection and the elucidation of the fundamental physical principles underlying adsorption-induced forces.

THOMAS THUNDAT is an ORNL Corporate Fellow and group leader for the Nanoscale Science and Devices group at the Oak Ridge National Laboratory. He is also a research professor of physics at the University of Tennessee, Knoxville, and a visiting professor at the University of Burgundy, France. He received his master’s degree in physics from the Indian Institute of Technology, Madras, India, in 1980. He did his graduate work at the State University of New York at Albany, obtaining a PhD in surface physics in 1987, under the direction of Walter Gibson. He then moved to Arizona State University as a postdoctoral fellow with Stuart Lindsay. He joined the Health Safety division (now Biosciences division) of the Oak Ridge National Laboratory as a researcher in 1991. He was promoted to Senior Scientist in 1997, group leader in 1998, and Distinguished Scientist in 2002. He was elected as an ORNL corporate fellow in 2005.

His research interests include nanomechanics, solid-liquid interface, nanomechanical sensors for physical, chemical, and biological detection, scanning probe microscopy, quantum-confined atoms, and mid infrared spectroscopy of surface adsorbates. His research currently focuses on developing chemical and biological sensors with extreme high sensitivity using micro and nanocantilever arrays. Dr. Thundat has published over 230 publications in peer-reviewed journals and 45 book chapters, and his work has received over 5,000 citations. He has given over 150 invited talks at international conferences and institutions. He has been awarded 28 U.S. patents.

Dr. Thundat is the recipient of many awards that include the U.S. Department of Energy’s Young Scientist Award, two R&D 100 Awards, ASME Pioneer Award, Discover Magazine Award, three National Federal Laboratory Consortium Awards for Technology Transfer, Scientific American 50 Award, Jesse Beams Award, Indian Institute of Technology Madras Distinguished Alumnus Award, Nano 50 Award, Battelle Distinguished Inventor Award, and many ORNL Awards for invention, publication, and research and development. He is an elected Fellow of the American Physical Society (APS) and the American Association for the Advancement of Science (AAAS), and he is currently on the editorial boards of the Review of Scientific Instruments, Research Letters in Nanotechnology, and Nanoscale Microscale Thermophysical Engineering.

ECS Battery Division Technology Award

Hiroshi Inoue will receive the ECS Battery Division Technology Award at the Battery Division Luncheon & Business Meeting on Monday, October 13, in South Pacific 4, in the Mid-Pacific Conference Center.

HIROSHI INOUE was born and educated in Japan. He received his BEd in 1985 from Yokohama National University, majoring in physics. After graduating, he found a position with an electrical equipment manufacturer, where he researched materials related to optics. From 1992 to 1999, he was employed by a chemical company where he started his career researching and developing lithium ion batteries. In 1999, he came to work at Sony Corporation, where he studied new materials for...
negative electrodes. Currently he is employed by the Research and Development Division of the Energy Business Group of Sony Corporation in Koriyama City, Fukushima.

**ECS Battery Division Technology Award**

Satoshi Mizutani will receive the ECS Battery Division Technology Award at the Battery Division Luncheon & Business Meeting on Monday, October 13, in South Pacific 4, in the Mid-Pacific Conference Center.

**Satoshi Mizutani** received his bachelor’s and master’s degrees in applied physical chemistry at Waseda University in 1999 and 2001, respectively. After graduation, he joined Sony Corporation and worked in the battery business group. At Koriyama in Fukushima, Japan, he worked on the research and development of materials for lithium ion batteries. He is now employed by Sony Energy Devices Corporation and works on the development of new materials.

**ECS Battery Division Research Award**

Peter Bruce will receive the ECS Battery Division Research Award at the Battery Division Luncheon & Business Meeting on Monday, October 13, in South Pacific 4, in the Mid-Pacific Conference Center.

**Peter G. Bruce,** FRS, FRSE, FRSC, is the Wardlaw Professor of Chemistry at the University of St. Andrews, Scotland. His research interests embrace the synthesis and characterization of new materials (extended arrays and polymers) with new properties or combinations of properties, especially energy materials for new generations of energy conversion and storage devices. Recent efforts have focused on the synthesis and understanding of nanoelectrodes for lithium-ion batteries, including nanowire anodes and mesoporous cathodes, novel approaches to high capacity cathodes, and the influence of order on the conductivity of polymer electrolytes. His research has been recognized by a number of awards and fellowships, including from the Royal Society and the Royal Society of Chemistry.

**ECS Corrosion Division H. H. Uhlig Award**

Martin Stratmann will receive the ECS Corrosion Division H. H. Uhlig Award at the ECS Corrosion Division Luncheon & Business Meeting on Tuesday, October 14 in Iolani 5/6/7 in Tapa Tower.

**Martin Stratmann** studied chemistry at the Ruhr-Universität Bochum and received his diploma in 1980. In 1982, at the Max-Planck-Institut für Eisenforschung in Düsseldorf (under director H. J. Engell), he finished his PhD on electrochemical studies of phase transformations in rust layers; after which, he spent his postdoctoral education with Ernest Yeager at the Case Western Reserve University. The habilitation in physical chemistry followed in 1992 at the University of Düsseldorf with electrochemical studies on metal surfaces covered with ultrathin electrolyte layers. 1994 he took over the Chair in Corrosion Science and Surface Engineering at the University of Erlangen. Since 2000 he has been a scientific member of the Max-Planck-Gesellschaft and Director of the Max-Planck-Institut für Eisenforschung in Düsseldorf, leading a department of interface chemistry and surface engineering. He is also a faculty member of the Materials Science Department and of the Chemistry Department at the Ruhr-Universität Bochum.

His research interests lie in the area of corrosion related electrochemistry with emphasis on microscopic aspects and in situ spectroscopy, electrochemistry at buried metal/polymer interfaces (an area where he pioneered novel electrochemical techniques), atmospheric corrosion, adhesion, and surface chemistry of reactive metal substrates. His research was awarded several times; among others the Otto-Hahn medal of the Max Planck Society, the T. P. Hoare Award (twice), the Masing Award of the German Society of Materials Science, the DEHEMA Award of the Max-Buchner Forschungstitung, the U. R. Evans Award of the Institute of Corrosion, and the W. R. Whitney Award of the International Association of Corrosion Engineers. Prof. Stratmann is an ECS Fellow and a member of the North Rhine-Westphalia Academy of Science and of the Austrian Academy of Science.

**ECS Electrodeposition Division Research Award**

Olaf Magnussen will receive the ECS Electrodeposition Research Award at the Electrodeposition Division Luncheon & Business Meeting on Wednesday, October 15, in the Tapa Café Area in Tapa Tower.

**Olaf M. Magnussen** is a full professor of solid state physics at the Institute of Experimental and Applied Physics of the Christian-Albrechts-Universität (CAU) in Kiel, Germany. He performed his graduate research in the group of Jürgen Behm and received his PhD at Ulm University in 1993. After a postdoc in the Physics Department of Brookhaven National Laboratory from 1993 to 1995, he returned to Ulm where he worked at the Institute of Surface Chemistry and Catalysis until joining the CAU in 2001.

His research interests include the study of the structure and dynamics of electrochemical interfaces by in situ methods, in particular scanning tunneling microscopy and surface X-ray diffraction using synchrotron radiation. Since his experiments on copper underpotential deposition in the early nineties (one of the first atomic-resolution in situ STM investigations) detailed mechanistic studies of electrodeposition processes aiming at clarifying the interplay of atomic-scale structure growth behavior, and nanoscale morphology, have been a major focus of his research. This work also included significant experimental advancements, such as the development of in situ video-STM for real-time dynamics studies. In addition, he has employed these techniques to study surface phase transitions, anionic and organic adsorbate layers and adsorbate dynamics, corrosion and corrosion inhibition, as well as electrolytic model systems.

Among the awards Prof. Magnussen has received for his scientific work are fellowships by the Deutsche Forschungsgemeinschaft and the German Chemical Industry, an Award of the Umler Universitätsgesellschaft for the best PhD thesis 1994, the Molecular Imaging Young Electrochemistry Scanning Probe Microscopist Award 1997, and the Merckle Research Award 2001.

**ECS High Temperature Materials Division Outstanding Achievement Award**

David Young will receive the ECS HTM Division Outstanding Achievement Award at the ECS HTM Division Luncheon & Business Meeting on Monday, October 13 in Nautilus 2 in the Mid-Pacific Conference Center.

**David J. Young** obtained a PhD in physical chemistry from Melbourne University, and then migrated to Canada. Over the next 8 years he worked at University of Toronto (post doc in chemistry), McMaster University (research associate in...
Returning to Australia, he worked in the research labs of BHP Steel, then moved to the University of New South Wales. After a period in chemical engineering, he became Head of the School of Materials Science & Engineering, a position he held for 15 years. After retiring from that position, he is now focused on research. His research has been mainly on high temperature alloy oxidation and corrosion, and is particularly concerned with reactions involving mixed gases. This has led him into the complexities of corrosion reactions producing multiple reaction products, either as complex scales, or as distributed zones of internal precipitation. While the focus has always been on gaining a fundamental understanding of reaction mechanisms, the work has obvious practical utility, an important factor in ensuring research funding! Recent research has concerned water vapor effects on oxidation, and metal dusting reactions. Water vapor can volatilize Cr₂O₃, preferentially adsorb on oxide surfaces, change scale microstructures and transport properties, and inject hydrogen into both scale and oxide. Metal dusting involves reaction of carbon-supersaturated gases with metals, producing a variety of metastable states with the one common feature of leading to rapid metal destruction. Distinguishing between the multiple mechanistic effects in a quantitative way, and arriving at useful predictions, is the challenge confronting his present work.

**ECS Physical and Analytical Division Max Bredig Award**

Bernard Gilbert will receive the ECS PAED Max Bredig Award at the Max Bredig Award in Molten Salt Chemistry Dinner and Address on Tuesday, October 14 in Iolani 5/6/7 in Tapa Tower.

**BERNARD GILBERT** studied chemistry at the University of Liège where he completed his PhD in 1972 with a dissertation on Raman spectroscopy applied to weak complexes in solution. From 1972 to 1974 he did a postdoctoral stay with G. Mamantov at the University of Tennessee and Oak-Ridge National Laboratories and another postdoctoral stay in 1976-1977 with R. A. Osteryoung at Colorado State University. He has been an invited professor at the Norwegian Institute of Technology (1981, topics: spectroscopy of molten salts and structure) and at the University of Tennessee (1987, topics: analytical chemistry in non-aqueous solvents). He has been the Belgian national representative for the Commission on Electroanalytical chemistry of the IUPAC (1981-1989), and a member, then president, of the Physical Chemistry Commission of the FNRS (National Funds of Scientific Research) (1995-2005). He is also president of the Analytical Division of the Royal Chemical Society of Belgium (since 1996). He joined the faculty of the University of Liège in 1979 where he is now professor of analytical chemistry.

Professor Gilbert has long been devoted to research in structure and chemistry of molten salts of industrial interest. In particular, he has developed experimental methods allowing investigating by Raman spectroscopy the structure of highly corrosive and high temperature melting solvents, such as cryolite. He also contributed to the discovery and development of room temperature ionic liquids and to their first applications to industrial processes. His present research interests are about the acid-base and solvation properties of ionic liquids.

**ECS Sensor Division Outstanding Achievement Award**

Chung-Chium Liu will receive the ECS Sensor Division Outstanding Achievement Award at the ECS Sensor Division Luncheon & Business Meeting on Tuesday, October 14 in Iolani 3/4 in Tapa Tower.

**CHUNG-CHIUM LIU** is the Wallace R. Persons Professor of Sensor Technology and Control and a professor of chemical engineering at Case Western Reserve University (CWRU) in Cleveland, Ohio, U.S. He is also the Director of the Electronics Design Center, a research center focusing on the application of microfabrication and micromachining processing technologies to the manufacturing of chemical and biomedical microsystems. This includes the application of these microfabrication processing technologies to the advancement of chemical and biomedical sensors as well as micro-size electrochemical energy systems, such as the printable primary zinc-alkaline and zinc-air batteries, solid oxide fuel cells, and ultra capacitors. In recent years, Professor Liu has incorporated the nano-metallic catalysts into the fabrication of the micro-sensors and micro-electrochemical energy systems, further enhancing the performance of these micro-electrochemical systems using cost effective microfabrication manufacturing processes. Professor Liu has been engaged in teaching and research in electrochemical sciences and engineering in the academic environment for forty years. He has taught and trained students and researchers directly related to the research interests of ECS. He is a Fellow of both ECS and the American Institute of the Medical and Biological Engineering.

**Technical Exhibit**

The Technical Session coffee break is scheduled for 0930h in Coral 3 of the Mid Pacific Conference Center on Tuesday and Wednesday to allow meeting attendees additional time to browse through the exhibits. The exhibit will feature instruments, materials, systems, publications, and software of interest to attendees.

**Exhibit Hours**

**Monday, October 13** ....................................................... 1800-2030h  
includes the Monday Evening Poster Session

**Tuesday, October 14** ..................................................... 0900-1400h
